

Cost-Effective Productivity Retrofit

MADE IN USA

Praxair can make your old cutting machine young again.

BEFORE

AFTER

Gain many years of service and competitive performance from your existing machine with a top-to-bottom overhaul and equipment upgrade from Praxair.

It's like **CPR** for your old machine.

Ask Praxair to breathe new life into your older cutting machines with a complete overhaul performed on-site or at our facility. We retrofit all controls, drives, gearboxes, motors, and plasma or oxy-fuel systems. Your rebuilt machine can perform at today's high-technology competitive standards for a fraction of the cost of a new machine.

Why stop there? Add productivity enhancements such as hole cutting, beveling, additional cutting stations or lifters. Your rebuilt machine will cut with high-definition precision, reduce scrapping and rework, and extend the lifetime of plasma consumables. Your bottom line will thank you.

ProStar CNC Plate Cutting Systems

We've provided productivity improvements to over one million customers. Put Praxair to work for you.
